X1 User Experience for IBM OmniFind and Content Edition delivers unified search across all enterprise information.

▶ X1 AND IBM: UNIFIED AND ACTIONABLE SEARCH FOR THE ENTERPRISE

Today's enterprises face two accelerating trends that are overwhelming current systems. For end users, the explosion in "unstructured" information such as email, RSS feeds and other non-database content is preventing them from getting their jobs done. For administrators, the cost of managing multiple systems is rising while providing secure access to key data is getting increasingly more difficult.

The X1 search solution for IBM Information Integrator OmniFind Edition and Content Edition is designed to solve those problems with a platform for unified, actionable search across the enterprise. This solution combines X1's award-winning user experience on the desktop with IBM's robust enterprise-scale search technology.

Features and Benefits

The X1 User Experience for IBM OmniFind and Content Edition includes these features and benefits:

Integration of Desktop and All Enterprise Content. The X1 User Experience for IBM OmniFind and Content Edition allows users to search for key information regardless of location or underlying application. Users can find related items that might be in email, files, documents or databases.

Superior Desktop User Experience. X1's award-winning interface has been proven to help users find information more quickly than with alternative interfaces. This is based on unique features such as "fast-as-you-type" search, category filtering, preview and highlighting which allow users to quickly identify the exact piece of information.

Best in Class Lotus Notes/Domino Integration. The X1 User Experience for IBM OmniFind and Content Edition supports searching any number of NSF file formats simultaneously including the ability to search MIME-type attachments. It also supports Notes and Domino databases.

Deep Integration with Major Document Management Systems. Documents stored in major applications such as FileNet or Documentum can be quickly retrieved and acted upon. Users can find and act on what they are looking for across all repositories with the X1 solution.

Take Action on Key Results. With IBM's Content Edition, major tasks can be exposed through the X1 interface for users to interact with underlying applications in a consistent manner. Tasks such as "check-in/check-out" or "update properties" can be executed as soon as the document is located without having to launch the application separately.

Secure. The X1 User Experience for IBM OmniFind and Content Edition respects the existing security infrastructure for authenticating users and allowing access. Administrators can add additional layers of security through customizing the views and capabilities each user receives.

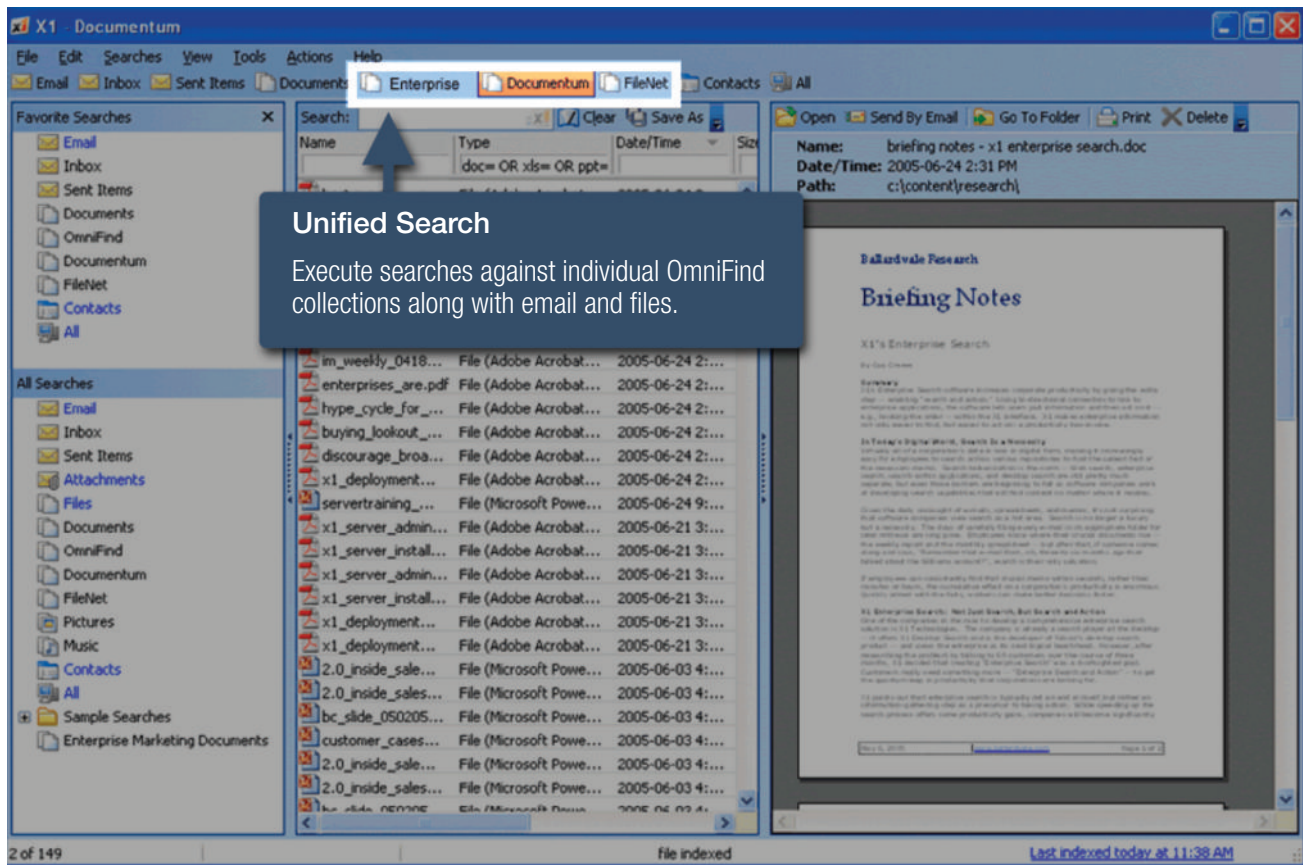

Extensible. The solution supports out-of-the-box over 370 file types and offers deep integration with major enterprise applications. For applications not supported, APIs are available to easily extend the solution to integrate content from custom data sources.

▶ HOW X1 DOES IT

Leveraging the IBM Information Integrator infrastructure, the X1 desktop client is able to access the underlying index resident in OmniFind. X1 preserves the security for individual file access and includes the ability to highlight and preview each item. Through a separate integration with IBM's Content Edition, key actions for underlying applications can be exposed through the X1 interface. The resulting user interface can be further customized to add or change views, add specific post-search actions and work with existing desktop and web applications.

▶ RESULTS FOR YOUR ORGANIZATION AND YOUR USERS

With the X1 User Experience for IBM OmniFind and Content Edition, the power of enterprise search is unleashed from the datacenter to the desktop, unlocking productivity across all your users. With a simple but rich out-of-the-box interface, little training is required and users can take advantage of these capabilities almost immediately. They can also take action on their results, saving even more time.

For administrators, the system is easy to customize and deploy with no development required. It can be configured and extended for other enterprise data stores or to integrate with custom workflows. Ultimately, the solution provides a strong ROI by enhancing the productivity of users and reducing costs for IT to support multiple applications. Companies looking to increase sales or reduce costs overall will find the X1/IBM solution an integral tool for successfully achieving those initiatives.

▶ SOLUTION REQUIREMENTS

For X1 User Experience for IBM OmniFind and Content Edition

- X1 Client 5.2
- X1 User Experience for IBM 1.0
- IBM Information Integrator OmniFind Edition 8.2.2
- IBM Information Integrator Content Edition 8.2

▶ SPECIFICATIONS

For X1 Client

- Windows 2000 / XP / Vista
- 128 MB RAM required / 512 MB RAM recommended*
- 1 GB free hard disk recommended*
- Supported Email Application

** Actual memory and space used depends on number of files and email messages indexed*
